

LeddarTech releases the version 2.1 of its d-tec configuration software

LeddarTech is excited to announce the latest Leddar™ configuration software version 2.1 available immediately. This new release version has several powerful new features and enhancements from the previous version, notably:

- 16 detections zones per d-tec
- Graphical enhancements:
 - Ability to display a variety of arrow shapes for virtual loops instead of boxes
 - Capability of displaying on-screen labels for virtual loops
 - New feature to provide *monitor-only* function of video images for non-technical viewers
- New simulator functionality for training and demonstration purposes
- Faster, more accurate learning
- Improved stability
- Enhanced detection performance

This version is compatible with all current and previous Leddar™ d-tec products.
